

Whirlpool Corporation Files Petitions Challenging Unlawful Trade Practices

Petitions request investigation into residential clothes washers imported into the United States from South Korea and Mexico

BENTON HARBOR, Mich., December 30, 2011 – Whirlpool Corporation (NYSE: WHR) today filed anti-dumping petitions against residential clothes washers from South Korea and Mexico, and a companion countervailing duty petition against the same products from South Korea. Whirlpool filed these petitions seeking enforcement of United States and international trade laws. The company's goal is to promote a fair and open global trading system, to protect American jobs and to ensure its ability to continue to innovate and invest in the United States.

This legal action is intended to help protect Whirlpool Corporation's 23,000 U.S. employees, and the communities in which they work, from practices that violate United States and international trade laws. The company filed the petitions only after an exhaustive review of the facts which revealed compelling evidence of dumping and material injury. The anti-dumping petitions assert that two Korean manufacturers, Samsung Electronics (Samsung) and LG Electronics (LG), have dumped their products into the United States from manufacturing facilities in South Korea and Mexico. This action undermines competition, causes material injury to the appliance manufacturing industry, threatens American jobs and ultimately harms consumers who are left with fewer product choices.

"When foreign manufacturers are permitted to dump products into the United States, it undermines competition," said Marc Bitzer, president, Whirlpool North America. "It is important for an open global trading system to have a process for enforcement to maintain the integrity of the system and provide all manufacturers a level playing field on which to compete."

Whirlpool produces its clothes washers in Clyde, Ohio at the world's largest and most efficient washing machine plant. This location employs more than 3,500 workers who demonstrate the vitality of American manufacturing every day. Lawful competition will help preserve these jobs, restore lost jobs due to unlawful trade practices, and create opportunities for new jobs. The company has invested \$175 million in an innovative clothes washer platform at the Clyde, Ohio laundry plant to produce some of the most energy- and water-efficient clothes washers available.

For more than 100 years, Whirlpool has been recognized for making some of the most innovative and trusted laundry products in the world. Whirlpool currently operates nine plants in Arkansas, Iowa, Ohio, Oklahoma and Tennessee and has employees and suppliers across the United States.

The anti-dumping petitions were filed with the U.S. Department of Commerce and the U.S. International Trade Commission and request an investigation into the production of residential clothes washers in South Korea and Mexico, which are being sold in the United States at substantially less than fair value.

These petitions are consistent with the company's long-standing support for expanding a fair and open global trading system.

ANTICIPATED DECISION DATES FOR INVESTIGATIONS (assuming full extension)

December 30, 2011 Whirlpool filed petitions with the U.S. Department of Commerce and the U.S. International Trade Commission
